

**Triplet** It's called Triplet because you can get three wing blanks from a sheet of 1/16" x 3" x 36" balsa

**Catapult Glider by Charles Primbs**

Trim model to fly in the opposite direction of launch. For example: if you launch right handed, the model should glide to the left. Use rudder offset to trim glide circle.

Original models were finished with two coats of nitrate dope on all parts. The wing has three coats and is colored on the tips with spray fluorescent paint.
